

AML/CFT Policy & Risk Assessment

Entity: DeeX Technologies Ltd (DEEX OPTIONS LTD) **Date:** 2026-06-22

1. Purpose

DeeX maintains a risk-based AML/CFT program to identify, assess, and mitigate money laundering and terrorism financing (ML/TF) risk across its products: crypto/digital asset trading, gift card exchange, bill payments, P2P transfers, virtual cards, and merchant payments.

2. How We Assess Risk

We rate ML/TF risk across four dimensions and apply controls proportional to the rating:

Dimension	What We Look At
Customer risk	KYC tier, transaction behavior, declared source of income, PEP/sanctions status
Product risk	Higher inherent risk on crypto trading and gift cards (conversion/layering vectors); lower on bill payments
Channel risk	Fully digital, non-face-to-face onboarding
Geographic risk	Cross-border counterparties, exposure to high-risk jurisdictions

Customers are scored against these factors at onboarding and on an ongoing basis; higher-risk customers are subject to Enhanced Due Diligence (additional source-of-funds evidence and senior compliance sign-off before limit increases).

3. Sanctions & PEP Screening

Customers are screened against sanctions lists and PEP databases at onboarding, with periodic re-screening for active customers. A confirmed sanctions match results in immediate account restriction; a PEP match triggers Enhanced Due Diligence.

4. Transaction Monitoring

DeeX runs an internal Compliance Engine that automatically flags transaction patterns for review:

Alert	Triggers On
High-frequency trading	Trade velocity inconsistent with the customer's profile
Multi-device usage	Abnormal number of distinct devices on one account
Large withdrawal	Withdrawals at or near tier limits, or repeated near-limit patterns
Failed KYC	Repeated failed or inconsistent KYC submissions
Wash trading	Circular trading with no genuine economic purpose

Flagged accounts are triaged by a Compliance Officer (pending → reviewing → resolved/dismissed) and can be cleared, dismissed, or suspended. Every action is logged in an internal audit trail.

5. Suspicious Activity Reporting

Activity confirmed as suspicious is escalated internally to the Money Laundering Reporting Officer (MLRO), who is responsible for filing a Suspicious Transaction Report (STR) with the Nigerian Financial Intelligence Unit (NFIU) within the regulatory timeframe.

6. Recordkeeping & Review

Transaction records, alert dispositions, and screening results are retained for a minimum of 5 years. This risk assessment is reviewed at least annually, or upon a new product launch or material regulatory change.
