

# KYC Policy & Procedures

**Entity:** DeeX Technologies Ltd (DEEX OPTIONS LTD) **Date:** 2026-06-22

## 1. Purpose

DeeX operates a tiered Know Your Customer (KYC) program to verify customer identity before granting access to trading and withdrawal functionality, in line with CBN tiered-KYC guidance. Every customer is verified before they can transact, and access expands as verification deepens.

## 2. Tiered Verification Levels

| Tier    | What We Collect                                                                                 | Trading Limit | Withdrawal Limit |
|---------|-------------------------------------------------------------------------------------------------|---------------|------------------|
| Level 1 | Bank Verification Number (BVN) + liveness selfie                                                | \$1,000       | \$100 (one-time) |
| Level 2 | Government-issued ID (NIN, passport, or driver's license) + proof of address (≤3 months old)    | \$10,000      | \$500 (daily)    |
| Level 3 | Employment/business documentation, declared source of income, risk questionnaire, mandatory 2FA | \$25,000      | \$1,000 (daily)  |

A customer cannot exceed the limits of their current tier, and cannot advance to the next tier until the current one is reviewed and approved.

## 3. Verification Process

- Identity capture** — BVN is collected and checked against NIBSS; a liveness selfie confirms the applicant is a real, present person (anti-spoofing).
- Document verification** — Government ID and proof of address are reviewed to confirm legal identity, age, and residential address.
- Profile & risk questionnaire** — At Level 3, the customer declares employment/business status, source of income, and expected transaction volume, and enables 2FA.
- Compliance review** — Every submission is reviewed by a Compliance Officer through an internal KYC queue and explicitly approved or rejected (with reason) before any limit increase takes effect.
- Re-verification** — Documents are refreshed if they expire, or if proof of address ages past the 3-month freshness window at the next tier upgrade.

## 4. Recordkeeping

KYC submissions, supporting documents, and all approval/rejection decisions are retained for the life of the customer relationship plus a minimum 5-year regulatory retention period, and are recorded in an internal audit log.

## 5. Ownership

The Compliance function is responsible for reviewing KYC submissions and maintaining this process; the Money Laundering Reporting Officer (MLRO) has overall accountability for the program.
